

Project 1: Compile Linux Kernel

Yesheng Ma

March 8, 2017

Abstract

The configuration, compilation, and installation of the Linux kernel is the first step to learn Linux kernel. In this report, I will discuss how to get Linux source code and get the latest kernel installed on your PC.

1 Introduction

Linux kernel is an operating system kernel, which is written in C and assembly language originally by Linus Torvalds. The latest stable version of Linux is 4.10 and is licensed under GPLv2. In this project, we will begin our tour in Linux kernel, where we will build and install the latest kernel in a PC or virtual machine.

2 Obtain Linux Kernel Source

We can obtain Linux source code both in the form of git repository or through HTTP. The official site of the Linux kernel is <https://www.kernel.org>. For example, you can download the latest kernel source code in the `.tar.xz` form using `wget` or using `git clone` to copy the whole repository.

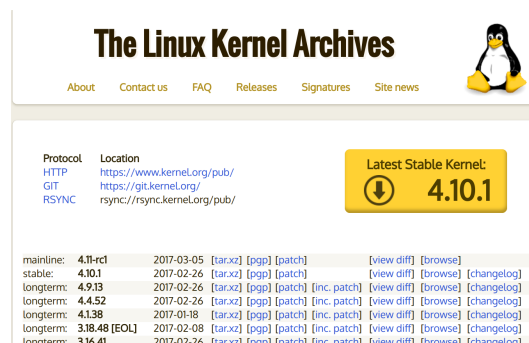

Figure 1: Linux Kernel Official Site

```
manifold@kernel: /usr/src/linux-4.10$ sudo tar --xz -xvf linux-4.10.tar.xz
```

Figure 2: Extract the tar file

After you have downloaded the `tar.xz` file, you can extract the file using the command `tar --xz -xvf`. Then we can check out the files extracted in the source directory.

```
manifold@kernel: /usr/src/linux-4.10$ ls
arch      CREDITS   firmware  ipc        lib         net         security  virt
block     crypto    fs         Kbuild     MAINTAINERS README     sound
certs     Documentation include    Kconfig    Makefile    samples    tools
COPYING   drivers   init       kernel     mm          scripts    usr
```

Figure 3: Linux Source File Directory

3 Build the Kernel

3.1 Configure the Kernel

To compile the kernel, you need to first do some configurations to it. The most often used configuration tool is called `menuconfig`. Type `make menuconfig` in the source directory and the default setting should be fine for us.

3.2 Compile the Kernel

First we should compile the C and assembly source code to binary form. To do this, simply execute `make` in the source directory.

```
manifold@kernel: /usr/src/linux-4.10.1
IHEX  firmware/tigon/tg3_tso5.bin
IHEX  firmware/3com/typhoon.bin
IHEX2FW firmware/em16/loader.fw
IHEX2FW firmware/em16/firmware.fw
IHEX2FW firmware/em16/bitstream.fw
IHEX2FW firmware/em16/loader.fw
IHEX2FW firmware/em16/bitstream.fw
IHEX2FW firmware/em16/spdlf.fw
IHEX2FW firmware/em16/ntdl.fw
IHEX  firmware/kaweth/new_code.bin
IHEX  firmware/kaweth/trigger_code.bin
IHEX  firmware/kaweth/new_code_fix.bin
IHEX  firmware/kaweth/trigger_code_fix.bin
IHEX  firmware/tl_3419.fw
IHEX  firmware/nts_cdma.fw
IHEX  firmware/tl_5052.fw
IHEX  firmware/nts_gsn.fw
IHEX  firmware/nts_edge.fw
H16TOFW firmware/edgeport/down.fw
H16TOFW firmware/edgeport/boot.fw
H16TOFW firmware/edgeport/down2.fw
IHEX  firmware/edgeport/down3.bin
IHEX2FW firmware/whiteheat_loader.fw
IHEX2FW firmware/whiteheat.fw
IHEX2FW firmware/keysan_pda/keysan_pda.fw
IHEX  firmware/cpa2/stv0672_vpd.bin
IHEX2FW firmware/keysan_pda/xlrcon_pgs.fw
IHEX  firmware/yam/1200.bin
```

Figure 4: Making the Kernel

Then we should install the modules using `make modules_install`.

```

manifold@kernel: /usr/src/linux-4.10.1
INSTALL /lib/firmware/emi26/firmware.fw
INSTALL /lib/firmware/emi26/bitstream.fw
INSTALL /lib/firmware/emi62/loader.fw
INSTALL /lib/firmware/emi62/bitstream.fw

INSTALL /lib/firmware/yam/9600.bin
DEPMOD 4.10.1
manifold@kernel: /usr/src/linux-4.10.15

```

Figure 5: Make Kernel Model

Last, we need to install the kernel image to desired location. To do this, simply execute `make install` (may need sudo permission).

```

manifold@kernel: /usr/src/linux-4.10.1$ sudo make install
sh ./arch/x86/boot/install.sh 4.10.1 arch/x86/boot/bzImage \
System.map "/boot"
run-parts: executing /etc/kernel/postinst.d/apt-auto-removal 4.10.1 /boot/vmlinuz-4.10.1
run-parts: executing /etc/kernel/postinst.d/initramfs-tools 4.10.1 /boot/vmlinuz-4.10.1
update-initramfs: Generating /boot/initrd.img-4.10.1
run-parts: executing /etc/kernel/postinst.d/plym-utils 4.10.1 /boot/vmlinuz-4.10.1
run-parts: executing /etc/kernel/postinst.d/unattended-upgrades 4.10.1 /boot/vmlinuz-4.10.1
run-parts: executing /etc/kernel/postinst.d/update-notifier 4.10.1 /boot/vmlinuz-4.10.1
run-parts: executing /etc/kernel/postinst.d/zz-update-grub 4.10.1 /boot/vmlinuz-4.10.1
Generating grub configuration file ...
Warning: Setting GRUB_TIMEOUT to a non-zero value when GRUB_HIDDEN_TIMEOUT is set is no longer s
upported.
Found linux image: /boot/vmlinuz-4.10.1
Found initrd image: /boot/initrd.img-4.10.1
Found linux image: /boot/vmlinuz-4.8.0-22-generic
Found initrd image: /boot/initrd.img-4.8.0-22-generic

Found memtest86+ image: /boot/memtest86+.bin
done
manifold@kernel: /usr/src/linux-4.10.15
manifold@kernel: /usr/src/linux-4.10.15

```

Figure 6: Install the Kernel

4 Change Boot Configuration

Since we are using Ubuntu 16.10 Linux distribution, we need to configure the Grub boot manager in order to boot from the new kernel. To do this, execute the command `sudo update-grub2`.

```
manifold@kernel: /usr/src/linux-4.10.1$ sudo update-grub2
Generating grub configuration file ...
Warning: Setting GRUB_TIMEOUT to a non-zero value when GRUB_HIDDEN_TIMEOUT is set is no longer supported.
Found linux image: /boot/vmlinuz-4.10.1
Found initrd image: /boot/initrd.img-4.10.1
Found linux image: /boot/vmlinuz-4.8.0-22-generic
Found initrd image: /boot/initrd.img-4.8.0-22-generic
Found memtest86+ image: /boot/memtest86+.elf
Found memtest86+ image: /boot/memtest86+.bin
done
manifold@kernel: /usr/src/linux-4.10.1$
```

Figure 7: Update Grub Boot Info

5 Checkout New Kernel

After we reboot the computer, we can checkout the kernel version of the system using `uname -a`.

```
manifold@kernel: ~$ uname -a
Linux kernel 4.10.1 #1 SMP Tue Feb 28 00:32:50 CST 2017 x86_64 x86_64 x86_64 GNU/Linux
```

Figure 8: New Kernel Info

As we can see in this figure, we can see that we have successfully transferred to Linux 4.10.

6 Conclusion

This is the first project on Linux kernel. Although this is a quite simple project: only compile the kernel, I hope it will be a good start for my hacking in Linux kernel.

Acknowledgement

Thanks Prof. Chen for guidance on Linux kernel and TAs for their hard work.
